CLEAN WATER AND SANITATION

Rural Reconstruction Foundation, in partnership with WASTE, Netherlands, is collaborating on the "Financial Inclusion Improves Sanitation & Health" project. This initiative aims to establish integrated and sustainable WASH (Water, Sanitation, and Hygiene) and waste management services by encouraging private sector participation. Finish Mondial is a global program which is being implemented simultaneously in 6 countries of the world including Bangladesh. The goal is to sustainably add 10,000,000 people worldwide by 2025 among the workforce involvement in sanitation. The project focuses on developing businesses related to safe sanitation and solid waste management while promoting an inclusive management system. It involves social business organizations, informal workers, and cooperatives in the waste and sanitation sectors. The project's comprehensive approach encompasses the entire waste management value chain—from generation to ultimate disposal—aligning with the municipality's goals of providing efficient waste collection, sanitation services, and ensuring a clean, green, safe, and climate-resilient city.
